

Multi-Level Roller Conveyor System

This mechanical equipment is designed for material handling and conveying. It utilizes a series of rollers and platforms in a multi-level arrangement for efficient transfer and processing.

Overview

SD-180S Multi-Level Conveyor

The SD-180S is a robust mechanical equipment solution engineered for efficient material handling and conveying applications. Featuring a multi-level configuration, this system optimizes space and facilitates the smooth transfer of goods in industrial settings. Built for durability and mobility, it includes adjustable supports and high-quality rollers to ensure reliable performance in manufacturing and warehousing environments.

Technical Specifications

Model Number	SD-180S
Suitable Applications	Manufacturing, Warehousing, Distribution Centers, Material Handling

Design Features

Mobility & Setup

- Integrated casters for easy mobility
- Adjustable supports for height customization
- Multi-level roller configuration

Construction Material

Steel • Aluminum
