

Multi-Operator Welding Power Source

This multi-operator welding power source is designed for simultaneous supply to multiple welding stations. It allows efficient, independent welding across workstations due to robust construction and individual controls.

Product Overview

Industrial Multi-Operator Welding Solution

This multi-operator welding power source is engineered to provide reliable, independent welding current to multiple workstations simultaneously. Featuring robust construction and dedicated control panels for each module, the unit is optimized for large-scale fabrication and complex construction environments. By enabling simultaneous operation, it significantly enhances productivity and workflow efficiency across professional welding sites.

Technical Specifications

Available Model Variants

- ZXE1-500/40
- EXE1-500/40
- EXE1-300/40

Output Capacity

500 A

Maximum Current

40 %

Duty Cycle

Operational Features

Key Operational Benefits

Multi-Operator Support, Independent Control, Industrial Construction, Simultaneous Operation
