

# Multi-Pair Copper Telecommunication Cable

This multi-pair telecommunication cable is designed for local loop and in-building voice and data transmission. It features insulated copper conductors and a durable outer jacket.

## Product Overview

### High-Density Connectivity Solution

This multi-pair telecommunication cable is engineered for reliable voice and data transmission in local loop and in-building environments. Featuring twisted pairs of insulated copper conductors, it ensures consistent signal integrity for network and telephone infrastructure. The design includes color-coded conductors for streamlined identification and termination, protected by a durable outer jacket built to withstand environmental factors.

## Technical Construction

### Identification

Color-coded conductors

### Conductor Material

Copper

### Conductor Configuration

Twisted pairs

## Application

### Primary Applications

- Local loop telecommunication
- In-building voice transmission
- Data transmission
- Network infrastructure projects

### Protection Features

Durable outer jacket, Environmental resistance
