

Multi-Point Grease Lubrication Pump

This lubrication pump is designed to inject lubricating grease to multiple lubrication points in a centralized system. It is suitable for various industrial applications requiring efficient and reliable lubrication.

Overview

DDB Series Multi-Point Lubrication Pump

The DDB series is a robust, electric-motor-driven pump designed to efficiently deliver lubricating grease to multiple points across industrial machinery. By ensuring consistent lubrication, this system significantly reduces component wear, extends equipment service life, and lowers maintenance labor costs. It is engineered for reliability, making it an ideal solution for heavy-duty applications requiring long-distance grease transmission.
