

Multi-Row Seedling Transplanter

This transplanter is designed to transplant seedlings from a nursery or seedbed into the field. The multi-row design enables the simultaneous planting of multiple rows.

Product Overview

Professional Seedling Transplanter

This multi-row seedling transplanter is a semi-automatic solution designed for efficient field planting. It features independent planting units, a carousel-style PVC distributor with 18 cups, and a stainless steel falling pipe to ensure seedling safety. The design prioritizes ease of use with flexible row distance adjustments for various vegetable and flower crops.
