

Multi-Section Radiator for Heating Systems

This multi-section radiator is designed for efficient heat dissipation. It features a vertically ribbed design to maximize surface area, making it suitable for residential or commercial hydronic heating systems.

Overview

Efficient Heating Solution

This multi-section radiator is engineered for optimal thermal performance in both residential and commercial environments. Its vertically ribbed design maximizes surface area to ensure efficient and rapid heat dissipation throughout the space. Designed for seamless integration into standard hydronic heating systems, this unit offers a modern aesthetic combined with reliable functionality.

Technical Specifications

Suitable Applications

- Residential heating
- Commercial heating
- Hydronic systems

Design Type	Multi-section vertical radiator
Material	Aluminum Alloy, Metal
Installation	Wall-mounted
