

Multi-Stage Air Purification System

This system effectively removes inhalable particles like PM2.5, pathogens, and allergens such as pollen. It also reduces pollutants from indoor decoration, including formaldehyde, benzene, and VOCs.

Overview

Comprehensive Air Purification

This multi-stage air purification system is engineered to significantly improve indoor air quality by removing a wide range of airborne contaminants. It effectively targets inhalable particles such as PM10 and PM2.5, along with pathogenic microorganisms and allergens like pollen. Additionally, the system neutralizes indoor pollutants including formaldehyde, benzene, and VOCs, while eliminating unpleasant odors and atmospheric haze byproducts like ozone.

Filtration Capabilities

Filtration Stages

- Pre-filter
- HEPA filter
- Activated carbon filter

Contaminants Removed

PM10, PM2.5, Pollen, Formaldehyde, Benzene, VOCs, Ozone, Cigarette Smoke

Operation & Features

Operational Features

Adjustable fan speeds • Timer function • Quiet operation

Recommended Usage

Medium-sized rooms
