

# Multi-Stage Water Purification Device with Transparent Housing

This multi-stage water purification device features a transparent blue plastic housing. It is designed for water treatment applications in both home and industrial settings.

## Product Overview

### Multi-Stage Water Purification Solution

This advanced water purification device features a robust multi-stage filtration system designed for effective water treatment. The transparent housing allows for easy visual monitoring of the filter life and water condition, ensuring timely maintenance. Engineered for reliability, this unit is suitable for diverse water softening and purification applications in both residential and professional environments.

## Technical Specifications

Model Number	QY98-1X-20
Application	Water Softening, Purification
Compliance Standard	Q1

## Design Features

Housing Transparency	Yes
Structure	Multi-stage stacked filtration
