

Multi-Stage Water Purification Machine

This water purification machine employs a multi-stage filtration system. It provides clean and safe drinking water for household use.

Product Overview

Advanced Multi-Stage Filtration

This multi-stage water purification system is engineered to deliver high-quality, safe drinking water by effectively removing impurities. Utilizing a complex filtration design, the unit features a structured sequence of cartridges to ensure thorough purification. Its compact footprint makes it an ideal solution for integration into various water treatment setups.

Technical Dimensions

| | |
|------------------------|---------------------------------|
| Dimensions (H x W x D) | 386 x 186 x 471 mm |
| Application | Compact, Household, Multi-stage |

Filtration System

Included Filter Components

- Ultrafiltration membrane filter
- Pre-activated carbon filter
- Post-activated carbon filter
