

Multi-Station Printing Machine

This multi-station printing machine is designed for high-volume, multi-color printing applications. It features a series of printing units arranged in a line, each equipped with rollers, cylinders, and controls for applying a specific color or coating.

Overview

High-Performance Multi-Station Printing

This multi-station printing machine is engineered for high-volume, multi-color printing applications. Featuring a series of printing units arranged in a line, each station is equipped with precision rollers, cylinders, and controls for accurate color or coating application. Built with a robust frame, it ensures consistent print quality and reliable registration for professional industrial needs.

Technical Capabilities

Compatible Substrates	Paper, Film, Foil
Printing Configuration	In-line multi-station

Control & Operation

Control Interface

- Digital displays
- Adjustment knobs for process fine-tuning

Construction

Build Quality

Robust Frame • Precision Components
