

Multi-Story Prefabricated Modular House

This modular house project in Angola covers 3900m². It was completed in 2008 and features prefabricated panels.

Project Overview

Multi-Story Modular Housing Solution

This prefabricated modular house system offers a high-efficiency solution for large-scale residential or office requirements. Designed for rapid assembly, the system utilizes a robust steel frame structure paired with durable prefabricated panels. Originally implemented in a 3,900m² project in Angola, this modular approach demonstrates scalability and performance in international environments.

Project Details

Total Project Area

3900 m²

Total Area

Completion Date

May 2008

Construction Features

Structural System

Modular, Prefabricated, Steel Frame

Building Configuration
