

# Multi-Tooth Milling Cutter

This specialized cutting tool features a cylindrical shank and a multi-toothed cutting head. It is designed for precision material removal, such as creating grooves, chamfers, or intricate shapes in metal or other materials.

## Product Overview

### High-Precision Multi-Tooth Milling Cutter

This specialized multi-tooth milling cutter is engineered for precision material removal tasks, including the creation of grooves, chamfers, and intricate shapes. Featuring a robust cylindrical shank, it is designed for seamless integration with machine tools such as milling machines and drill presses. The complex profile of the cutting head ensures efficient performance in demanding industrial applications.

## Technical Specifications

### Compatible Machinery

- Milling Machines
- Drill Presses

### Tool Design

Multi-toothed cutting head with cylindrical shank

### Primary Applications

Grooving, Chamfering, Precision Shaping, Material Removal
