

Multi-Unit Air Conditioning System

This is a multi-unit air conditioning system designed for large-scale cooling applications. The system features multiple identical modules arranged in a row.

Overview

High-Capacity Cooling Solution

This multi-unit air conditioning system is engineered for large-scale cooling applications, providing reliable climate control for expansive spaces. The modular design allows for flexible installation, ensuring consistent performance and efficient temperature management. Built for demanding environments, this system offers a robust solution for professional cooling requirements.

System Architecture

System Design	Modular Multi-Unit
Configuration	Row-arranged modules
Ideal For	Large-scale cooling, Commercial facilities, Industrial climate control

Appearance

Design Features

Modular • Scalable • Compact footprint

Exterior Color	White
