

Multi-Unit Interphone Payer System

This system provides a multi-unit communication network. It is designed for secure and convenient communication and access control in residential or commercial settings.

System Overview

Comprehensive Communication Network

This multi-unit interphone and pager system is engineered for robust residential and commercial communication. It integrates outdoor stations, indoor monitors, and central management units into a unified network architecture. Designed for secure access control, this solution ensures reliable connectivity across complex multi-unit environments.

System Architecture

System Components

- Outdoor Stations
- Indoor Monitors
- Control Units
- Management Stations
