

Multi-Unit Residential Interphone and Pager System

This interphone and pager system is designed for multi-unit residential buildings. It features two-way audio and video communication, password-based unlocking, and a four-zone alarm system.

System Overview

Advanced Residential Communication System

This multi-unit residential interphone and pager system is designed to provide secure and efficient communication for both villa-style and multi-story residential buildings. The system facilitates two-way audio and video interaction between residents and visitors, while offering robust access control through password-based unlocking. Additionally, it integrates a four-zone alarm system to enhance building security and supports network connectivity for scalable configurations.

Key Features

Core Capabilities

Two-way Audio, Two-way Video, Password Access Control, Four-Zone Alarm, Network Connectivity

System Configuration

Supported Deployments

- Villa-style configuration
- Multi-story building configuration
- Networked integration

Model Number

KW-290

Security & Access

Alarm Zones

4 zones
