Overview

Precision Prototyping for Multifunction Devices

This multifunction telephone prototype service offers high-precision manufacturing to bring your product designs to life. Whether you provide existing drawings or require ODM services to develop your concepts, we specialize in creating physical models for design verification and user testing. Our capabilities extend across various metal and plastic materials to ensure your prototype meets specific aesthetic and ergonomic requirements.

Manufacturing Services

Supported Materials

- Various Metal Materials
- Various Plastic Materials

Service Type

Precision Prototyping, ODM, Design Verification, User Testing

Design Features

Physical Layout

- Rectangular body design
- Circular earpieces
- Square button keypad grid
- Integrated rectangular display screen
- Dedicated function keys

Primary Use Cases

Ergonomic Evaluation • Aesthetic Assessment • Marketing Presentations • Design Verification

Customization

Flexible Production

We welcome customer-provided prototype drawings and can adapt the manufacturing process to suit specific material preferences, including both plastics and metals. Our ODM services allow for the transformation of initial thoughts and concepts into physical prototypes.
