

Multifunctional Analog MIG Welding Machine

This is a multifunctional analog MIG welding machine suitable for various welding applications. It features adjustable parameters for optimal welding performance and a user-friendly interface.

Overview

Versatile Welding Performance

The MIG-M series is a specialized analog MIG welding solution engineered for high-quality steel welding. This multiprocess power source is designed to handle diverse welding requirements, ensuring flexibility for various projects. It includes essential advanced features such as burnback and creep start, providing precise control for professional results.

Technical Features

Advanced Functions

- Burnback control
- Creep start

Welding Capabilities

MIG Welding, Multiprocess, Steel Welding

Design

Series Type

MIG-M Series • Compact Design (MIG-MC)
