

Multigrip Rivets

Multigrip rivets are designed for clamping materials of varying thicknesses, offering a strong and reliable fastening solution. These rivets accommodate a wide range of material thicknesses, which reduces the need for multiple rivet sizes.

Product Overview

Versatile Fastening Solution

Multigrip rivets are engineered to clamp materials of varying thicknesses, offering a highly reliable fastening solution for diverse industrial applications. Their design provides excellent pull-up and gap-bridging capabilities, ensuring secure joints even when material alignment is less than perfect. By accommodating a wide range of material thicknesses, these rivets significantly reduce the need for carrying multiple rivet sizes in your inventory.

Key Features

Key Benefits

- Accommodates varying material thicknesses
- Excellent pull-up capabilities
- Superior gap-bridging performance
- Reduces inventory requirements for different sizes
- Secure joints in inconsistent alignment scenarios

Application Suitability

Ideal Applications

Inconsistent material thickness, Variable material assembly, General industrial fastening, Repair and maintenance
