

Multilayer Plastic Sheet Production Extruder

This multilayer plastic sheet extruder produces high-quality plastic sheets with multiple layers. The equipment integrates advanced extrusion technology to ensure precise control over sheet properties.

Product Overview

High-Efficiency Co-Extrusion System

The 660 type multilayer co-extrusion plastic sheet extruder is engineered for high-performance production of multi-layer plastic sheets. By leveraging advanced domestic and foreign technology, this machine ensures superior plasticization and consistent sheet quality. It is an ideal solution for manufacturing packaging containers such as drink cups, ice cream cups, yoghurt cups, and packing boxes.

Technical Specifications

Compatible Materials	PP, PE, PS
Model Type	660
Main Components Material	38CrMoALA
Surface Treatment	Nitriding process for corrosion resistance

Features

Machine Highlights

- High-quality nitrided screw and machine tube
- Optimized screw length and diameter for superior plasticization
- Advanced electric replace filter device on die head
- Designed for efficient production of multilayer containers

Compliance

Certifications

CE
