

# Multirole Combat Aircraft

This multirole combat aircraft is designed for international cooperation. It features outstanding mobility, greater range, and strong weapon load capability, with low-altitude and high subsonic mobile combat capability.

## Overview

### New Generation Multi-Purpose Fighter

The Xiaolong is a sophisticated light fighter aircraft designed for high-performance international operations. It features exceptional mobility and an extended combat radius, making it highly effective for both interception and ground attack missions. With its impressive STOL capabilities and robust weapon load capacity, it serves as a versatile solution for modern aerial defense requirements.
