

Multistage Centrifugal Water Pump

This multistage centrifugal pump is designed for water boosting and transfer applications. It features a robust construction with a cast iron pump body and stainless steel impellers for corrosion resistance.

Overview

Multistage Centrifugal Water Pump

This multistage centrifugal pump is engineered for high-performance water boosting and liquid transfer applications across domestic, agricultural, and industrial sectors. It features a durable cast iron pump body paired with corrosion-resistant stainless steel impellers for long-term reliability. The unit is powered by a Totally Enclosed Fan Cooled (TEFC) electric motor, which ensures safe and consistent operation even in challenging environments.

Key Features

Operational Advantages

- High-quality sealing mechanism
- Advanced pumped liquid cooling system
- Low-noise operation profile
- Integrated floating ball exhaust valve

Technical Construction

Construction Materials	Cast Iron Body, Stainless Steel Impellers
Motor Technology	TEFC (Totally Enclosed Fan Cooled)
