Product Overview

Reliable Multistage Submersible Technology

This multistage, medium-cooled submersible pump is engineered for efficient water supply in garden and domestic settings. It is ideal for utilizing rainwater from storage tanks for applications like toilet flushing, laundry, and irrigation. Featuring intelligent control electronics, the system automatically detects dry running conditions to prevent damage and ensures consistent operation even when dealing with potential debris like sand.

Key Features

Safety & Protection

Dry Run Protection • Non-return Valve Protection • Automatic Control • Sand/Dirt Resistance

Primary Applications

Rainwater Harvesting, Domestic Water Supply, Garden Irrigation, Toilet Flushing, Washing Machine Supply

Technical Specifications

Performance Highlights

1 Automatic

Operation Mode

Pump Configuration

Multistage Submersible

Cooling Method

Medium-cooled
