

Musical Movement with Pinned Cylinder and Tuned Comb

Precision engineered musical movement featuring a pinned cylinder and tuned comb. This mechanism is designed to produce melodic sounds when the cylinder rotates, plucking the individual teeth of the comb.

Product Overview

Precision Musical Movement

This high-precision musical movement features a meticulously crafted pinned cylinder and a tuned steel comb. Designed for reliable acoustic reproduction, the mechanism produces melodic tones as the cylinder rotates and plucks the comb teeth. Built with durable brass and steel components, it is engineered for consistent performance in music boxes and automated instruments.

Technical Specifications

Ideal Applications

- Music boxes
- Automated musical instruments
- Precision audio projects

Materials

Brass, Steel
