

N95 Medical Particulate Respirator

This N95 medical particulate respirator is designed for a close facial fit and very efficient filtration of airborne particles. It is suitable for the protection of medical staff and complies with standard GB19083-2010.

Product Overview

Medical-Grade Respiratory Protection

The N95 Medical Particulate Respirator is a high-efficiency protective device engineered for medical environments. It provides reliable filtration against airborne particles, including droplets, blood, body fluids, and secretions. Designed for secure facial fit and comfort, this respirator is essential for epidemic prevention and healthcare safety.
