

Naked Bike Motorcycle with Steel Trellis Frame

This motorcycle features a liquid-cooled engine mounted in a tubular steel trellis frame. The design incorporates a single headlight, upright handlebars, and front and rear disc brakes.

Overview

Naked Bike Performance

This naked bike motorcycle features a robust tubular steel trellis frame designed for agility and street performance. Powered by a liquid-cooled engine, the machine offers a balanced ride with an upright riding position and responsive handling. It combines classic streetfighter styling with essential modern components like disc brakes and alloy wheels, making it a reliable choice for urban commuting and spirited riding.
