

Natural Gas Refinery Project

This complex industrial facility is designed for processing natural gas. It features intricate pipe networks and distillation columns to refine natural gas.

Project Overview

Comprehensive Refinery Engineering Services

This large-scale industrial service offering covers the full lifecycle of construction for complex oil and gas refining units. Utilizing advanced petrochemical engineering, these projects deliver high-capacity infrastructure for both natural gas processing and crude oil refinement. The service ensures seamless integration of technical design, construction management, and operational readiness for critical energy infrastructure.

Service Capabilities

Refining Units Managed

- Atmospheric and vacuum distillation
- Diesel hydrotreating
- Hydrocracking
- Hydrogen production
- Continuous reforming
- Delayed coking
- Fluid catalytic cracking unit
- Sulfur recovery unit

Service Scope

Service Scope

Project Management, Construction, Technical Services, Engineering, Refining Infrastructure
