

NC Drilling and Milling Machine

This high-precision NC drilling and milling machine is designed for versatile machining operations. It features a rigid frame construction to ensure enhanced stability and accuracy during drilling and milling processes.

Overview

High-Precision Machining Capability

This NC drilling and milling machine is engineered for versatile machining operations, combining a rigid frame construction with advanced control systems. It provides exceptional stability and accuracy, making it an ideal choice for mold making, precision parts manufacturing, and general machining tasks. Designed for efficiency, the machine features a comprehensive coolant system and flexible spindle speed settings to ensure optimal performance across various materials.

Technical Specifications

Key Features

- Rigid frame construction for stability
- User-friendly CNC control system
- Integrated coolant system for heat dissipation
- Adjustable spindle speeds and feed rates

Machining Capabilities

Drilling, Milling, Mold Making, Precision Parts
