

Network Behavior Management System

Network behavior management system designed for internal network management. This system ensures network security without impacting network efficiency or requiring configuration changes.

Overview

Network Behavior Management System

The NP20 is a compact, embedded network appliance designed for efficient network security and management. Featuring an intuitive B/S (browser/server) configuration interface, it eliminates the need for client-side software, making it easy to deploy and maintain. This versatile system helps businesses prevent network abuse, protect confidential information, and optimize cyber resource usage.

System Architecture

Management Interface	B/S (Browser/Server) structure
System Design	Embedded system
Maintenance Requirement	Low to none

Physical Features

Status Indicators Power LED • System Status LED	
Form Factor	Compact
Connectivity Ports	Ethernet, USB, VGA

Capabilities

Key Functions

- Network security management
- Network control
- Prevention of network abuse
- Prevention of confidential information loss
- Cyber resource optimization

Target Applications	Network Security, Routing, Software-Defined Networking (SDN), SOHO Office, Enterprise
