

Network Cable Termination Block

This network cable termination block is designed for structured cabling systems. It provides a central location for connecting individual wires from network cables, which facilitates easy organization and maintenance of network connections.

Product Overview

Professional Network Termination

This network communication device is designed for efficient cable termination and management in structured cabling systems. Featuring a durable plastic construction, it provides a centralized, organized location for connecting individual network wires. The unit is engineered for versatile installation, supporting both rack and wall-mounting configurations to suit various facility layouts.

Technical Specifications

Mounting Type	Rack Mount, Wall Mount
Construction Material	Durable Plastic
Primary Application	Structured Cabling Termination
Connection Method	Punch-down
