

# Network Equipment Enclosure

This network equipment enclosure is designed to house and protect sensitive electronic components. Its robust construction ensures durability and reliable protection from environmental factors, making it suitable for indoor or outdoor use.

## Product Overview

### Robust Network Equipment Enclosure

This gray metal enclosure is engineered to provide secure housing for sensitive network communication equipment and electronic components. Designed for durability, it features a sturdy rectangular door equipped with a recessed handle and a reliable locking mechanism. Its robust construction makes it an ideal solution for protecting critical hardware from environmental factors in both indoor and outdoor settings.

## Physical Characteristics

Color	Gray
Material	Metal

## Security & Access

Locking System	Yes
Handle Type	Recessed handle

## Usage

### Common Applications

- Network hardware housing
- Electrical component protection
- General electronic equipment storage

Suitable Environments	Indoor, Outdoor
