

Network Management Software

This software platform provides comprehensive network management capabilities. It features authentication authorization, desktop management, network monitoring, network segmentation management, mobile storage management, and document security management, built upon a reliable network infrastructure.

Overview

Comprehensive Network Management Platform

This network management software serves as a robust foundation for organizational security and efficiency. It integrates critical infrastructure controls, including authentication, network monitoring, and segment management, into a single, cohesive interface. Designed for enterprise-grade environments, the platform ensures secure data handling and streamlined resource management.

Core Modules

Integrated Management Capabilities

- Authentication & Authorization
- Desktop Management
- Network Monitoring
- Network Segmentation Management
- Mobile Storage Management
- Document Security Management

Infrastructure Status

Trusted Network Foundation
