

Network Monitoring Software

This software solution facilitates comprehensive network monitoring. It is designed to oversee data flow between various interconnected devices, such as servers, cameras, and monitors.

Product Overview

Comprehensive Network Monitoring Solution

This network monitoring software provides a robust platform for overseeing complex interconnected systems. It facilitates clear visualization of data flows between servers, edge devices, and monitoring hardware, making it an ideal choice for security surveillance and industrial process control applications. Designed for professional environments, it ensures streamlined management of network infrastructure and real-time data transmission oversight.

Technical Capabilities

Compatible Infrastructure

- Central Servers
- Surveillance Cameras
- Monitoring Displays
- Edge Devices

Key Features

Network Diagramming, Data Flow Mapping, Infrastructure Management, Security Monitoring
