

Network Router and Switch Combo

This combo device combines the functionalities of a network router and a switch. It is designed to manage network traffic and facilitate data packet forwarding within a local area network.

Product Overview

Integrated Network Connectivity Solution

This versatile networking component serves as a dual-function router and switch, streamlining local area network infrastructure. Engineered for reliable data transmission, it supports standard unshielded twisted pair (UTP) cabling to ensure efficient connectivity. Designed for professional environments, it provides robust performance for local communication systems.
