

Network Routers and Switches

Network routers and switches are essential devices for data transmission. They enable connected devices to communicate efficiently within a network.

Product Overview

Professional Networking Components

This collection features high-performance electronic components designed for network routers and switches. Featuring advanced integrated circuits like the TMC8025 and precision-engineered circuit boards, these parts provide the fundamental architecture for reliable network hardware. Ideal for manufacturers and repair technicians seeking high-quality components for networking infrastructure.

Technical Details

IC Part Identification

- TMC8025

Component Types

Integrated Circuits, Circuit Boards, Network Interface Components

Hardware Composition

Surface Mount Components

- Resistors
- Capacitors
- Logic ICs
