

Network Routing and Switching Device

This network routing and switching device is designed for network management and data transmission. It features multiple interface modules, indicator LEDs, connection points, a display screen, and control buttons on the front panel.

Overview

Professional Network Routing and Switching Device

This advanced network routing and switching device is engineered for robust data transmission and efficient network management. It features a versatile modular design with dedicated interface modules to ensure high performance in demanding environments. The unit includes an integrated front panel display and intuitive control buttons, allowing for seamless configuration and real-time monitoring of status through dedicated indicator LEDs.

Technical Specifications

Interface Modules	6 modules
Indicator LEDs	Yes

Interface & Control

Control Interface	Display Screen, Front Panel Buttons
-------------------	-------------------------------------

Features

Primary Capabilities

- Network Routing
- Data Switching
- Transmission Management
