

# Network Server Cabinet Enclosure

This server cabinet features a stylish one-push lock design for ease of access. The mesh front and back doors, combined with blind plates, optimize airflow and cooling efficiency, reducing energy consumption.

## Product Overview

### Professional Network Infrastructure Enclosure

This high-performance server cabinet is engineered for the secure housing and organization of critical network equipment. Constructed from high-quality cold-rolled steel, the cabinet offers robust protection and durability for demanding IT environments. The design prioritizes equipment safety, accessibility, and efficient thermal management to support long-term hardware reliability.

## Technical Standards

### Compliance Standards

ANSI/EIA RS-310-D, IEC297-2, DIN41491, DIN41494, GB/T3047.2-92, ETSI

## Material and Construction

### Construction Details

Component	Material	Thickness
Frame	SPCC Cold-rolled steel	2
Bracket	SPCC Cold-rolled steel	2

### Finishing Process

- Degreasing
- Pickling
- Phosphating
- Electrostatic spraying
