

Network Switch

This network switch is designed for demanding network environments. It offers advanced features such as VLAN support, QoS, and port mirroring, ensuring optimal network performance and security.

Overview

High-Performance Network Connectivity

The FW500 is a high-performance network switch engineered for demanding network environments. It provides essential features like VLAN support, Quality of Service (QoS), and port mirroring to ensure optimal data throughput and network security. Built for reliability and scalability, this switch is an ideal solution for businesses seeking a dependable network infrastructure.

Key Features

Advanced Capabilities	VLAN Support, QoS, Port Mirroring
Scalability	Yes

Performance

Network Performance

500 FW
Model Series

Operational Details

Ease of Management	Supports standard network protocols and offers simplified configuration for both small and large organizations.
