

Nickel Plated Brass Earth Terminal Blocks

These nickel plated solid brass earth terminal blocks provide secure grounding connections. They are ideal for electrical panels, control systems, and grounding applications.

Product Overview

Reliable Grounding Solutions

These nickel-plated solid brass earth terminal blocks are engineered to provide secure and reliable grounding connections for demanding electrical environments. Featuring robust construction and multiple connection points, they ensure optimal electrical safety and effective earthing. Each point is equipped with precision screws for tightening and securing wires, making them an ideal choice for electrical panels and complex control systems.

Technical Specifications

Key Features

- Robust construction
- Multiple connection points
- Secure screw-tightening mechanism
- Corrosion-resistant nickel plating

Safety Standards

Electrical Safety Compliant • Effective Earthing

Material	Nickel-plated solid brass
Primary Applications	Electrical Panels, Control Systems, Grounding Applications
