

Non-Insulated Spade Connector

These non-insulated spade connectors are designed for creating secure and reliable electrical connections. Their spade design facilitates easy installation and removal.

Product Overview

Reliable Electrical Connectivity

These non-insulated spade terminals are engineered for secure and consistent electrical connections in demanding environments. Constructed from high-conductivity metal, they offer superior electrical performance and excellent corrosion resistance. The spade design facilitates efficient installation and maintenance, allowing for quick connection and removal without the need to fully extract the fastener.

Technical Details

Terminal Type	Non-Insulated Spade
Material	High-conductivity metal

Features

Key Features	Non-Insulated, Corrosion Resistant, High Conductivity, Spade Design
--------------	---

Application

Installation	Screw/Fastener mount
--------------	----------------------
