

Non-Magnetic Double Open End Wrench

This non-magnetic double open end wrench is suitable for environments where magnetic interference is a concern. It is constructed from durable, non-magnetic materials and features precisely machined openings for a secure grip.

Product Overview

Non-Magnetic Double Open End Wrench

This double open end wrench is engineered for specialized environments where magnetic interference must be avoided. Constructed from advanced non-magnetic alloys, it maintains structural integrity in extreme temperatures ranging from -250°C to 600°C. It offers a safe, environmentally friendly solution for high-precision industries that require non-magnetic and non-polluting tooling.

Technical Properties

Operating Temperature Range

-250 °C

Low Temp Limit

600 °C

High Temp Limit

Material

Titanium alloy or stainless steel

Magnetic Properties

Non-magnetic; will not be magnetized in strong magnetic fields

Certifications & Compliance

Certifications

CE, ISO 9001:2008, SGS, ROHS

Available Sizes

Standard Sizes

- 17
- 19
- 22
