

Non-Pressure Evacuated Tube Solar Water Heater

This solar water heater features evacuated tubes for efficient heating. It has a carbon steel outer tank and is designed for non-pressure systems.

Product Overview

Non-Pressure Evacuated Tube Solar Water Heater

This non-pressure evacuated tube solar water heater is designed for efficient solar absorption and reliable hot water supply. Built with a durable carbon steel series construction, it offers excellent heat preservation capabilities. It is an ideal solution for residential and small commercial applications seeking sustainable and cost-effective water heating.

Technical Specifications

System Type	Non-Pressure Evacuated Tube
Material Construction	Carbon Steel Series

Performance Features

Performance Highlights

100 %

Solar Absorption Efficiency

Applications

Suitable Applications	Residential, Small Commercial
