

# Non-Sparking Extension Ring Wrench

This non-sparking ring wrench is designed for use with extensions in hazardous environments. The copper alloy construction prevents sparks in potentially explosive atmospheres.

## ADDITIONAL IMAGES

## Product Overview

### Professional Non-Sparking Solution

This non-sparking extension ring wrench is engineered for safety in inflammable and explosive industrial environments. Utilizing an advanced die-forging process, the tool offers superior toughness, wear resistance, and high-temperature durability. It provides a reliable solution for maintenance professionals requiring secure torque transfer in critical hazard zones.

## Key Performance Indicators

### Core Metrics

|                                  |                                    |
|----------------------------------|------------------------------------|

|----------------------------------|------------------------------------|

## Material and Construction

### Technical Build

- Specialized copper alloy composition
- Die forging manufacturing process
- High-temperature resistance
- Corrosion resistant properties

## Compliance and Safety

### Certification Tags

Non-Sparking, Explosion-Proof, Industrial Grade, High Durability

## Technical Dimensions

### Available Specifications

| Feature      | Detail |
|--------------|--------|
| Minimum Size | 13mm   |
| Maximum Size | 50mm   |
