

Non-Sparking Pipe Wrench

This pipe wrench is designed for use in environments where flammable or explosive materials are present. The wrench is constructed from specialized materials that eliminate the risk of sparks during operation.

Overview

Professional Non-Sparking Pipe Wrench

This non-sparking pipe wrench is engineered for safety in hazardous environments where flammable or explosive materials are present, such as oil depots and chemical plants. Constructed from carbon steel, it features a robust design with serrated jaws to ensure a secure, slip-resistant grip on pipes and fittings. The adjustable jaw mechanism allows for versatile use across a range of pipe diameters, making it an essential tool for maintenance and installation tasks in high-risk locations.

Technical Specifications

Material	Carbon steel
