

# Non-Sparking Socket

These non-sparking sockets are designed for use in environments where sparks could cause a fire or explosion. They are available in multiple drive sizes.

## ADDITIONAL IMAGES

## Product Overview

### Safety-Critical Non-Sparking Sockets

These precision-engineered sockets are designed specifically for use in hazardous environments where flammable vapors, liquids, or dusts are present. Manufactured from high-quality aluminum bronze or beryllium copper alloys, these tools effectively mitigate the risk of sparks that could trigger fires or explosions. They are essential equipment for professionals working in oil refineries, chemical plants, and other high-risk industrial settings.

## Technical Specifications

### Available Drive Sizes

- 1/4 inch
- 1/2 inch
- 3/4 inch
- 1 inch
- 2 1/2 inch

### Socket Variations

Normal Type, Deep Type

## Material & Safety

### Material Options

Aluminum Bronze • Beryllium Copper

### Key Safety Features

- Non-sparking alloy construction
- Corrosion resistant
- Explosion-proof design
- Precision-machined fit
