

# Non-Woven Abrasive Hand Pads

These hand pads are made from durable synthetic fibers impregnated with abrasive grains. They are suitable for use on metal, wood, plastic, and composite materials.

## ADDITIONAL IMAGES

## Product Overview

### Industrial Strength Non-Woven Hand Pads

These non-woven abrasive hand pads are engineered for consistent performance across a wide range of industrial surface preparation and finishing tasks. Constructed from durable synthetic fibers impregnated with abrasive grains, these pads resist tearing and shredding while effectively conforming to irregular surfaces, corners, and intricate contours. They are suitable for use on metal, wood, plastic, and composite materials, and can be used with or without lubricants or solvents.

## Technical Specifications

### Available Grades

- Coarse
- Medium
- Fine

### Construction

Open-web synthetic fiber with abrasive grain impregnation

### Compatible Surfaces

Metal, Wood, Plastic, Composite

## Application & Usage

### Primary Applications

- Cleaning
- Deburring
- Blending
- Polishing
- Scuffing
- Finishing

### Industries Served

Automotive • Aerospace • Metalworking • Woodworking

### Usage Method

Manual hand use or machine-assisted with hand pad holder
