Product Overview

Advanced Growth Substrate

This innovative growth substrate is designed to replace traditional sponges, offering a superior environment for plant development. Engineered with a loose structure to facilitate optimal root breathing, it provides the perfect balance of nutrients, air, and water. With integrated slow-release fertilizer, this substrate eliminates the need for additional nutrient solutions for up to three months.

Key Features

Maintenance Level

Low Maintenance • Lazy Mode

Core Benefits

- Slow-release fertilizer included
- Optimal air and water balance
- Suitable pH levels for plants
- Clean, mess-free application
- Promotes root breathing
