

Oblique Circular Diamond Cup Wheel

This diamond cup wheel is designed for grinding and surface preparation of concrete and stone. Its oblique circular segment arrangement ensures efficient material removal and a smooth finish.

Overview

High-Performance Grinding Solution

The Oblique Circular Diamond Cup Wheel is engineered for the efficient grinding and surface preparation of concrete, stone, and various masonry materials. Featuring a specialized oblique circular segment arrangement, it ensures rapid material removal while maintaining a smooth, consistent finish. Built with high-quality diamond grit on a durable metal matrix, this tool is designed for longevity and reliable performance in demanding professional applications.

Technical Specifications

Primary Applications

- Surface leveling
- Coating removal
- Edge shaping
- Surface preparation

Design Features

Oblique circular segments • Durable metal matrix • High-quality diamond grit

Compatible Materials

Concrete, Stone, Masonry

Compatibility

Compatible Tools

Angle grinders and other compatible power tools
