

Oil Seal

This oil seal prevents leakage of lubricants in mechanical systems. It also prevents the entry of contaminants, such as dust and moisture.

Product Overview

High-Performance Oil Seal

This oil seal is designed to provide reliable sealing performance in various industrial and mechanical applications. It effectively prevents the leakage of lubricants and fluids while keeping contaminants out of critical machinery components. Engineered for durability, this component is an essential part for maintaining equipment longevity and operational efficiency.

Technical Specifications

Application Suitability

- Automotive Drivetrains
- Industrial Gearboxes
- Hydraulic Pumps
- Rotating Machinery

Seal Type	Rotary Shaft Oil Seal
Primary Function	Fluid Retention, Contaminant Exclusion, Leak Prevention
