

Oil Well Sucker Rod Pump

This is a subsurface sucker rod pump. It is manufactured per API Spec 11AX and specific customer designs.

Product Overview

Subsurface Sucker Rod Pump

This sucker rod pump is engineered according to the stringent API Spec 11AX standards, ensuring compatibility and reliability in demanding oil extraction environments. Designed to facilitate efficient power transmission from surface equipment to the downhole pump, these components are essential for consistent crude oil production. Each unit is built to withstand high-pressure conditions, providing a robust solution for diverse subsurface applications.

Technical Standards

Compliance Standard	API Spec 11AX
Design Options	Fully customizable based on customer-specific design requirements

Key Features

Included Components

- Sucker Rods
- Couplings
- Perforated Sections
