

Oilfield Drilling Tool with Helical Flute

This specialized drilling tool is designed for petroleum exploration and extraction. It features a helical flute configuration for efficient material removal and a robust construction.

Product Overview

High-Performance Drilling Solution

This specialized drilling tool is engineered specifically for petroleum exploration and extraction operations. Featuring an advanced helical flute configuration, it ensures highly efficient material removal during the drilling process. Its robust construction and hardened tip are designed to withstand the demanding conditions of subsurface formations, offering superior penetration and long-term durability.

Technical Specifications

Key Benefits

- Efficient material removal
- Enhanced subsurface penetration
- Robust durability
- Hardened tip construction

Design Type	Helical Flute Configuration
Primary Application	Petroleum Exploration, Extraction
